SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR A USER AGENT FOR PATTERN REPLAY

ABSTRACT

A system, method and computer program product are provided for User Agent operation. A network site is accessed utilizing a network. User interaction is simulated for navigating the network site based on client specifications. A web page is retrieved from the site. Identifiers are assigned to elements of the web page. The web page is rendered for further processing. Dynamic content of the web page is rendered. The rendered web page is returned to the client in a markup language.
